

BIMcontact

Web-based system that offers construction companies, industries, suppliers, consultants and real estate companies in the construction industry more efficient project planning, clearer control of resources and a more secure document management.

DOCUMENT MANAGEMENT

BIMcontact can store all types of modeling files, calculation results, and any other type of documents and drawings.

In the integrated IFC Viewer it is possible to view and enlarge models, view properties and turn on/off various categories and floors.

The File Viewer supports more than 300 document types including DWG. Control the rights of whole folder structures or single files.

Users also have the possibility to invite external customers or partners in projects or share specific files or documents to customers via a single link that each file is assigned. Track older versions and responsible in the document history.

PROJECT PLANNING

Plan projects or create an activity plan for the entire operation. Manage both the creation of activities and dependencies directly in an interactive Gantt view.

The portfolio summary obtains a comprehensive view of all the company's projects. Allocate resources to each activity, see how resources become congested during implementation by the day, week, or during the total month. Report and follow up both time spent and expenses on projects and activity level.

RESOURCE MANAGEMENT

The tool's resource management can plan, allocate and follow up that the enterprise resources are managed. Obtain detailed reports on financial outcomes on the individual as project and activity level. Follow up the current status of costs and revenues against budget. Customize reports to business needs. Ability to export reports to PDF and Excel.

MODULES

BASE
